

Construction Alert: Tuesday, November 18, 2025

Crews will conduct early morning concrete placement in the Tahquitz Creek bed.

Flaggers will be on-site to guide trucks as they enter and exit the project area.

TRAFFIC IMPACTS

Tuesday, November 18 | 6 a.m.

Concrete placement will begin at 6 a.m. so that concrete may properly cure and reduce traffic/community impacts due to increased construction activities.

Watch for traffic flaggers assisting trucks entering and exiting the job site at the south end of the bridge.

What to expect

6 a.m. to 7 a.m.

Additional flaggers and spotters will be on-site for extra safety precaution to allow trucks to temporarily silence back up alerts during early morning concrete placement. Some noise, such as trucks idling and workers communicating, will occur.

After 7 a.m.

Normal construction operations will resume.

This schedule may change due to weather or field conditions.
